Leica JetStream Viewer
Unlimited points, in the office or on the go

Speed for rendering of all your data, all the time

With Leica JetStream Viewer, take advantage of ultra-high speed rendering of your point cloud and model data to instantly open and display your entire project instantly as you navigate your data set. The JetStream Viewer can run connected or disconnected from the JetStream infrastructure on a local machine, even package it on a thumb drive with your data to leave behind with clients to allow them to perform basic measurements and navigate the data with ease.

Scale your productivity through collaboration

JetStream Viewer lets you harness the power of JetStream without using a functional JetStream licence that you rely upon in Leica CloudWorx. If you only need to review a data set, conduct a visual QA of a model to as-built conditions, preview a CAD design in context or take a quick measurement, there is no need to stop the work of your CAD expert. Users can leverage either the LGS format for simple, portable, model-compatible viewing or connect to JetStream Enterprise and use a network-connected JetStream Viewer to take advantage of extra features like multiple User Coordinate Systems and saved Limit Boxes to speed your work.

Simple point cloud viewing from anywhere

When installing JetStream isn't an option, you can always rely on JetStream Viewer Portable. Whether you are an organisation with strict security protocols or you just want to leave a simple package to wow a client or customer, there are many reasons to take advantage of this powerful tool. Simply load the JetStream package and your LGS files and models onto a thumb drive and you can easily hand off a self-contained JetStream experience. Even users unfamiliar with 3D data will be able to easily navigate the project.

PART OF HEXAGON

- when it has to be **right**

Point cloud data anytime
Leica JetStream Viewer - Three unique configurations to suit any situation

JETSTREAM VIEWER - CONNECTED

A locally installed, standalone viewer that lets you harness all the power of your JetStream licence without taking up a productive seat used by a CloudWorx plugin. Perfect for project managers who need to access their team's data hosted on a JetStream Enterprise server quickly and in high fidelity to review progress, take measurements, or record client videos. A network-connected JetStream Viewer allows you to access all of your project metadata such as UCS's and Limit Boxes.

JETSTREAM VIEWER – DISCONNECTED

A locally installed, standalone viewer that lets you view locally stored LGS files created by your team. Take advantage of most of the Viewer's capabilities including Markups, navigation and model support*. Perfect for a long-term client who wants to view progress or have constant but light weight access to their point clouds or a remote colleague who performs limited work with point cloud data.

JETSTREAM VIEWER - PORTABLE

A free, no-install viewer that can be packaged on a thumb drive and run from any PC, no network or WiFi access required. Leverage most of the Viewer's capabilities in a go-anywhere package that can be navigated by even the most inexperienced point cloud user. Perfect for sharing data with organisations with IT hurdles for new software or as a marketing tool for prospective customers.
